

The figure displays ten horizontal gel electrophoresis panels arranged vertically. Each panel shows multiple lanes of DNA bands. The lanes are labeled from left to right as follows:

- Lane 1: Labeled "L" (likely Lambda concatamers)
- Lanes 2-4: Labeled "A" (likely phage DNA)
- Lanes 5-7: Labeled "B" (likely another phage or plasmid DNA)
- Lanes 8-9: Labeled "C" (likely another phage or plasmid DNA)
- Lane 10: Labeled "D" (likely another phage or plasmid DNA)

Each panel shows distinct banding patterns, indicating successful separation and identification of the various DNA samples.
